

[POWER COMMANDER V]

2008-2015 Suzuki KingQuad 750

Installation Instructions

PARTS LIST

- 1 Power Commander
- 1 USB Cable
- 1 Installation Guide
- 2 Power Commander Decals
- 2 Dynojet Decals
- 1 Alcohol swab
- 2 Velcro strips

**THE IGNITION MUST BE TURNED
OFF BEFORE INSTALLATION!**

THE LATEST POWER COMMANDER
SOFTWARE AND MAP FILES CAN BE
DOWNLOADED FROM OUR WEB SITE AT:
www.powercommander.com

PLEASE READ ALL DIRECTIONS BEFORE STARTING INSTALLATION

Dynojet

2191 Mendenhall Drive North Las Vegas, NV 89081 (800) 992-4993 www.powercommander.com

POWER COMMANDER V INPUT ACCESSORY GUIDE

Optional Accessories such as
POD-300 unit or Auto-tune kit.

Wire connections:

To input wires into the PCV first remove the rubber plug on the backside of the unit and loosen the screw for the corresponding input. Using a 22-24 gauge wire strip about 10mm from its end. Push the wire into the hole of the PCV until it stops and then tighten the screw. Make sure to reinstall the rubber plug.

NOTE: If you tin the wires with solder it will make inserting them easier.

ACCESSORY INPUTS

Map -

(Input 1 or 2) The PCV has the ability to hold 2 different base maps. You can switch on the fly between these two base maps when you hook up a switch to the MAP inputs. You can use any open/close type switch. The polarity of the wires is not important. When using the Autotune kit one position will hold a base map and the other position will let you activate the learning mode. When the switch is "CLOSED" Autotune will be activated. (Set to Switch Input #1 by default.)

Shifter-

(Input 1 or 2) These inputs are for use with the Dynojet quickshifter. Insert the wires from the Dynojet quickshifter into the SHIFTER inputs. The polarity of the wires is not important. (Set to Switch Input #2 by default.)

Speed-

If your application has a speed sensor then you can tap into the signal side of the sensor and run a wire into this input. This will allow you to calculate gear position in the Control Center Software. Once gear position is setup you can alter your map based on gear position and setup gear dependent kill times when using a quickshifter.

Analog-

This input is for a 0-5v signal such as engine temp, boost, etc. Once this input is established you can alter your fuel curve based on this input in the control center software.

Crank-

Do **NOT** connect anything to this port unless instructed to do so by Dynojet. It is used to transfer crank trigger data from one module to another.

- 1 Remove the seat.
- 2 Remove the covers on the left hand side of the quad shown in Figure A.

- 3 Install the PCV under the seat using the supplied Velcro (Fig. B).
Make sure to clean both surfaces with the alcohol swab before attaching

- 4 Route the PCV harness to the left side of the quad and go thru the hole in the rear fender (Fig. C). Continue routing towards the throttle body.
- 5 Attach the ground wire of the PCV to the negative side of the battery (Fig. C).

- 6 Unplug the stock wiring harness from the fuel injector (Fig D).
This is a GREY 2 pin connector
- 7 Unplug the stock wiring harness from the Throttle Position Sensor (Fig. D).
This is a BLACK 3 pin connector.

- 8 Plug the PCV wiring harness in-line of the stock wiring harness and injector (Fig. E)
- 9 Plug the PCV wiring harness in-line of the stock wiring harness and TPS (Fig. E).
- 10 Reinstall covers and seat.
