

PARTS LIST

- 1 Dynojet Fuel Controller
- 1 USB Cable
- 1 CD-ROM
- 1 Installation Guide
- 2 Dynojet Decals
- 2 Velcro
- 1 Alcohol swab

2004-2009 Yamaha Majesty 400

Installation Instructions

PLEASE READ ALL DIRECTIONS BEFORE STARTING INSTALLATION

2191 Mendenhall Drive North Las Vegas, NV 89081 (800) 992-4993 www.dynojet.com

USB Port
 HIGH RPM Dial
 MID RPM Dial
 LOW RPM Dial
 MAP Select
 STATUS Light

Position	Notes
Position 1	Stock exhaust Stock air filter

All other positions equal no changes to the stock fuel curve

Selecting the Map Position

The Performance Module comes loaded with 2 maps. Using a #1 Phillips screwdriver, turn the map select dial to toggle between the loaded maps. Refer to the map position table below for the maps included in your Performance Module.

Using the DFC Range Dials

The Low, Mid, and High RPM Dials refer to the RPM range, in thirds, of your vehicle. Each dial allows +/- 10% fuel adjustment on top of what fuel changes are done in the map. With the dial facing straight up, there is no additional fuel change

For example, if your vehicle revs to 9000 RPM:

- The low RPM dial will adjust 0-3000 RPM
- The mid RPM dial will adjust 3001-6000 RPM
- The high RPM dial will adjust 6001-9000 RPM

Using DFC Control Center

Take your tuning to the next level with the DFC Control Center software.

- 1 Insert the CD provided into your computer's cd-rom drive. The launch program will run automatically. If auto-run is disabled, double-click the My Computer icon then double-click the CD drive icon. Double-click DFCsetup.exe to manually start the CD.
- 2 Click Install Software and follow the on-screen instructions to install the DFC software. The DFC software and maps will be stored in C:\Program Files\DFC Control Center.
- 3 Click Map Database. All maps will automatically be installed to the C:\Program Files\DFC Control Center\maps folder.

Loading Additional Maps

- 1 Connect the USB cable from the computer to the DFC Module. Verify the cable is fully seated in the DFC.
- 2 Run the Control Center software by double-clicking the program icon installed on your desktop or on your start menu.
- 3 Click Open Map File and select a map file.
- 4 Click Send Map. You can send the map to any of the ten map positions .

Altering Maps Using Software

The values in the map represent a percentage of fuel change over stock. A value of 10 in the map indicates at that throttle position and RPM range the vehicle will be 10% richer than stock. If the value is -10, then it would be 10% leaner than stock. You have the ability to fine tune your fuel curve by altering these values . The Control Center software allows a value of +250 to -100 in each cell.

- 1 Remove passenger seat
- 2 Remove grabrail.
- 3 Remove the covers on top and below the rear tail light.
- 4 Remove top and bottom left-hand side cover.
- 5 Bend open the black middle left hand side cover from the back side.
- 6 Using the supplied velcro secure the DFC to the top of the battery.
- 7 Attach the ground wire of the DFC to the negative side of the battery.
- 8 Route the DFC harness to the left side of the scooter.
- 9 Locate the 12 pin GREY connector on the left side of the scooter and unplug it.
- 10 Plug the harness from the DFC in-line of the stock wiring harness.
- 11 Reinstall bodywork.
