8	Adjusting Washers	DW0001
4	Slide Springs	DSP026
4	Main Air Correctors	DCO200
1	Tool	DT001

## STAGE ONE INSTRUCTIONS

DYNOJET®

E4145.001

1. Remove vacuum slide from carbs. Remove stock needles & spacers, noting order of assembly.

2. Install Dynojet needles on groove #3 from the top, using all stock spacers. Install the Dynojet washers above the E-clip (two per needle). Install Dynojet slide springs in place of the stock slide springs.

3. Remove velocity stack plate and locate the main air jet passage (Fig. B). With the flat end facing into the carb, install the main air correctors provided (DCO200). Use the tool provided (DT001) to tap lightly in place.

4. Remove stock main jets and replace with Dynojet mains provided. If you are running the stock exhaust use the DJ120 main jets, if you are running an aftermarket header or slip-on with high flowing baffle, use the DJ124 main jets. Be sure that the jets you are changing are the main jets.

5. Locate the Fuel Mixture Screw (Fig. B), carefully turn mixture screw clockwise until seated, then back out until you find your best idle. Base setting is 1-3/4 out turns.
